

AFRIVERSE

The knowledge layer for Africa-native AI.

A participatory knowledge-generation platform designed to capture, structure and validate African contextual knowledge for AI systems.

GOOGLE AFRICA AI LAB

Technical Partnership Proposal

MVP STATUS

Live web MVP • Interactive product flows • Knowledge-generation concept • Pre-AI infrastructure stage

August 2026

01 / THE OPPORTUNITY

Africa has knowledge. The infrastructure to structure it is still emerging.

Across African communities, useful knowledge exists in languages, oral traditions, professional practice, local adaptation, lived experience and community problem-solving. Much of it is fragmented, difficult to retrieve, inconsistently represented in digital systems, or disconnected from the AI applications that could benefit from it.

AfriVerse proposes a new layer:

a participatory system where people can contribute contextual knowledge, where that knowledge can be structured and validated, and where future AI systems can retrieve and reason over it with provenance and regional context.

CONTEXT

Capture knowledge with geography, language, domain and lived-experience context.

VALIDATION

Progressively distinguish community contribution, expert review and research-backed knowledge.

ACCESS

Make the resulting knowledge useful through web, mobile, voice and eventually low-bandwidth/offline interfaces.

02 / THE MVP

A working interface for the first layer of the system.

The AfriVerse MVP is deliberately focused. It does not claim to already be a frontier AI model. Instead, it demonstrates the human and product layer required to generate the knowledge that a future AI system can learn from and retrieve.

ASK AFRIVERSE

Users ask practical questions and can specify country, region or language to improve contextual grounding.

GENERATE QUESTIONS

The platform can turn a domain or local problem into focused knowledge-seeking questions.

CONTRIBUTE

Users provide local knowledge, experiences, language and practical methods.

KNOWLEDGE

Contributions can be organized around provenance, context, validation status and domain.

COMMUNITY

A participatory layer can create sustained engagement and a growing contributor network.

FUTURE AI

A secure backend can connect validated knowledge to RAG, evaluation, multilingual models and agents.

The key MVP loop

**Question → Local contribution → Context → Validation
→ Structured knowledge → AI-ready retrieval**

03 / PRODUCT EXPERIENCE

Designed as a product, not simply a data-collection form.

The experience is intended to feel familiar to users of modern AI products while introducing a deeper relationship with provenance and community knowledge.

USER ACTION	SYSTEM BEHAVIOUR
Ask a question	Capture question + optional country, region, language and domain context.
Generate a question	Generate focused prompts designed to elicit specific, locally useful knowledge.
Contribute an answer	Store contribution with consent, language/context metadata and provenance.
Review knowledge	Surface validation status, source type and confidence rather than presenting all information equally.
Ask again	Retrieve contextual knowledge and eventually combine it with AI reasoning.

04 / TECHNICAL DIRECTION

From participatory knowledge to an AI-ready knowledge layer.

The proposed architecture is intentionally modular. The MVP can begin with a conventional web stack and evolve toward multilingual retrieval, evaluation, model adaptation and distributed infrastructure as usage and validated data grow.

01	PARTICIPATION	Web / App / Voice / Community
02	KNOWLEDGE ENGINE	Structured knowledge • metadata • RAG • graph • provenance • validation
03	AI LAYER	Gemini / Gemma / specialized models • agents • multilingual reasoning • safety
04	EVALUATION	African-context benchmarks • language evaluation • retrieval quality • safety evaluation
05	INFRASTRUCTUR E	Cloud first; progressively explore regional, sovereign and edge/offline deployment

Important principle

AfriVerse is not positioned as a replacement for frontier AI. The opportunity is to build the contextual knowledge and evaluation layer that makes frontier AI more useful for African realities.

05 / KNOWLEDGE & DATA

The flywheel: participation creates knowledge; knowledge improves intelligence.

AfriVerse is designed around a continuous knowledge-generation loop. Questions reveal what people need to know. Contributions reveal how communities solve problems. Validation separates stronger evidence from unverified claims. Structured outputs become reusable knowledge assets.

**MORE PEOPLE → MORE CONTRIBUTIONS → MORE
CONTEXTUAL DATA → VALIDATION → BETTER
KNOWLEDGE → BETTER AI → BETTER ANSWERS**

LANGUAGE

Support for African languages, dialects, code-switching and voice is a core research direction.

PROVENANCE

Retain source type, contributor context and validation status so retrieval can be transparent.

PRIVACY

Consent, minimization, anonymization and appropriate governance should be built into the data lifecycle.

06 / WHY GOOGLE

A technical partnership could compress years of experimentation.

AfriVerse brings the problem definition, product concept, African-context focus and knowledge-generation model. The proposed partnership is to add deep AI engineering, evaluation and scaling expertise.

GEMINI

Multimodal reasoning, extraction, classification, synthesis and product intelligence.

GEMMA

Smaller-model experimentation and future edge/offline applications.

EVALUATION

Develop African-context benchmarks for retrieval, language, factuality and safety.

MULTILINGUAL AI

Improve performance across African languages, dialects and code-switching.

RESPONSIBLE AI

Design consent, privacy, safety, provenance and human-review mechanisms.

SCALE

Architecture, MLOps and product engineering needed to move beyond the MVP.

THE PROPOSITION

Combine Google's frontier AI capabilities with an Africa-centered platform for generating, structuring, validating and evaluating contextual knowledge.

07 / 24–36 MONTH VISION

Start in Nigeria. Expand through West Africa. Build continental.

2026 — VALIDATE

Live MVP • Nigeria pilot • contributors • Q&A; • question generation • voice experiments • early knowledge extraction • evaluation design

2027 — EXPAND

More languages • expert validation • additional domains • West African expansion • developer APIs • stronger retrieval and evaluation

**2028+ —
FEDERATE**

Continental knowledge network • institutional integrations • regional infrastructure • specialized agents • federated data architecture

LONG-TERM PRODUCT

AFRIVERSE APP + WEB → KNOWLEDGE ENGINE → AI PLATFORM → REGIONAL KNOWLEDGE NETWORKS → FEDERATED AFRICAN AI ECOSYSTEM

08 / SUSTAINABILITY & IMPACT

A platform can create value for users, institutions and developers.

CONSUMER

Free and premium AI experiences grounded in contextual knowledge.

ENTERPRISE

Contextual AI solutions and knowledge retrieval for organizations.

INSTITUTIONS

Research, knowledge infrastructure and specialized deployments.

DEVELOPERS

APIs, retrieval infrastructure, datasets and AI agents.

RESEARCH

Evaluation datasets, language resources and African-context benchmarks.

LONG TERM

Federated knowledge infrastructure supporting an expanding ecosystem.

IMPACT THESIS

Africa should not only consume AI products. African communities should participate in creating the knowledge systems, evaluations and applications that shape how AI works on the continent.

09 / THE ASK

Help us turn the MVP into an AI-ready knowledge platform.

We are seeking a technical partnership with Google Africa AI Lab to move AfriVerse from an interactive MVP into a rigorously evaluated, multilingual and scalable knowledge-generation platform.

WHAT AFRIVERSE BRINGS	WHAT WE ARE SEEKING
Problem definition and product thesis	AI engineering and architecture
Live MVP and product direction	Gemini / Gemma experimentation
African-context knowledge-generation model	Multilingual and multimodal research
Continental expansion vision	Evaluation and responsible-AI methodology
Commitment to community participation	Scaling, MLOps and technical mentorship

AFRIVERSE

**Ask Africa. Listen to Africa. Learn from Africa.
Build AI with Africa.**
